SNAP
Smart Search

Search all of these sources simultaneously

Tek Data
Systems Company

With Single Sign-On (also called SSO), one ID and password authenticates a user's identity and access rights, giving them entry to all the resources and services available through SNAP. With SSO, a user signs in once and that's it!

All the items returned from a search will be accessible to the user by an embedded link to the source of the item. All the user must do is simply click the link, which will pass them through to the resource without interruption.

SNAP provides the "best of both worlds" by combining Federated and Discovery search tools

SNAP "harvests" content / data from various sources and creates a single, massive central index that provides optimum response time and accurate results. **SNAP** indexes information which eliminates importing data before a search can begin; this process also helps to ensure that searches return up to date and relevant information. The **SNAP System** provides a single search across multiple content sources simultaneously, while delivering aggregated results. Through the use of faceted navigation, **SNAP** allows the user to "drill down" to the desired items.

SNAP will search any of the following sources

Subscription-based,
Proprietary,
The Web,
On-Site,
Off-Site and
Non-subscription

for any type of content

Videos,
Images,
Journals,
Books,
Audio,
Digital Content
...and more
